PREFACE

The Eleventh South African Symposium on Numerical Mathematics takes place in Umhlanga Rocks, Natal, from 8 to 10 July 1985. This event is organized by the South African Society for Numerical Mathematics (SANUM) in conjunction with the Department of Computer Science of the University of Natal, Durban. Invited papers will be presented by:

W B Gragg	University of Kentucky
J L Morris	University of Waterloo
L F Shampine	Sandia National Laboratories
S Zlobec	McGill University

This booklet contains summaries of the papers to be read at the Symposium. The authors of these papers have been offered the opportunity to submit their papers for publication, in full, in a special issue of the Journal of Computational and Applied Mathematics devoted entirely to the proceedings of this Symposium. Papers submitted for such publication will undergo the standard refereeing process prior to acceptance.

On behalf of SANUM and all the participants in the Symposium, I thank the University of Natal, and in particular, Professor Sartori-Angus and Ms. Ethel Carte of the Department of Computer Science, for their invaluable assistance in helping to organize the Symposium. The financial support of IBM (South Africa) is also gratefully acknowledged; without this support it would not have been possible to invite our distinguished overseas visitors to attend the Symposium.

Tjalling Ypma
(Secretary : SANUM)

May 1985

PARTICIPANTS

A Alaylioglu	(Transvaal Provincial Administration)
M L Baart	(C.S.I.R.)
G N Bakkes	(Inst. of Ground-water Studies, University of the Orange Free State)
G Benadé	(C.S.I.R.)
R A B Bond	(Department of Mathematics, University of Natal, Durban)
J F Botha	(University of the Orange Free State)
N Breytenbach	(I.M.T., Simonstown)
I Christie	(University of West Virginia)
E Cloete	(SANLAM)
G Delic	(University of the Witwatersrand)
J M de Villiers	(I.M.T., Simonstown)
A du Plooy	(C.S.I.R.)
T Geveci	(C.S.I.R.)
W B Gragg	(University of Kentucky)
T B Griffin	(University of Cape Town)
B M Herbst	(University of the Orange Free State)
S V Joubert	(Technikon, Pretoria)
B Kok	(University of Pretoria)
N Lamprecht	(Kernkor)
D P Laurie	(P.U. vir C.H.O.)
D S Lubinsky	(C.S.I.R.)
A J Maeder	(Monash University, Australia)
T Maredi	(Vista University)
M F Maritz	(University of the Orange Free State)
D H Martin	(C.S.I.R.)
J B Martin	(University of Cape Town)
J L Morris	(University of Leicester)
D M Murray	(I.M.T., Simonstown)
H Murrell	(Rhodes University)
A Naidoo	(University of Fort Hare)
H Neishlos	(N.I.A.S.T., C.S.I.R.)
M E Orłowska	(C.S.I.R.)
L Pretorius	(C.S.I.R.)
H Riphagen	(C.S.I.R.)
C H Rohwer	(I.M.T., Simonstown)
L F Shampine	(Sandia National Laboratories)
J A Snyman	(University of Pretoria)
J van Heerden	(UKOR)

A van Niekerk	(Kernkor)
T van Rooy	(Technikon, Pretoria)
P Vermeulen	(University of Pretoria)
L Viljoen	(Technikon, Pretoria)
J A C Weideman	(University of the Orange Free State)
K E Wojciechowicz	(Barclays Bank)
C J Wright	(University of the Witwatersrand)
Y Yavin	(C.S.I.R.)
T J Ypma	(University of the Witwatersrand)
S Zlobec	(McGill University)

CONTENTS

	page
Preface	iii
Participants	iv
A finite element program and its application to a four-span continuous bridge structure by A. Alaylioglu and H. Alaylioglu	1
Isoparametric-type transformations and rational curves by M.L. Baart	3
Rates of approximation of functions by polynomials : weighted spaces and Markov-Bernstein inequalities by G. Benadé	5
The method of lines - step width control and the global error series by R.A.B. Bond	7
The boundary collocation method by J.F. Botha	9
A Simple adaptive technique for nonlinear wave problems by I.I. Christie and J.M. Sanz-Serna	11
A non-self-adjoint general matrix Eigenvalue problem by G. Delic, E.J. Janse van Rensburg and G. Welke	13
Optimal local spline interpolants by J.M. de Villiers and C.H. Rohwer	15
'n Randelementmetode toegepas op 'n geoëlektriese probleem by A. du Plooy	17
Error estimates for a mixed finite element method for the wave equation by T. Geveci	19
Going around on circles by W.B. Gragg	21
Convergence of the unitary QR algorithm with Eberlein-Huang shift by W.B. Gragg	23
Finite-element approximations of problems involving non- differentiable functionals by T.B. Griffin and B.D. Reddy	25
The moving finite element method without penalty by B.M. Herbst	27
Galerkin methods for the evolution elasticity equations for incompressible materials by B. Kok	29
Conically exact methods for trajectory problems by D.P. Laurie	31
Rational approximation via Hermite-Padé Approximants by D.S. Lubinsky	33
Ode problem solver codes: A software engineering approach by A.J. Maeder, G.K. Gupta and P.E. Tischer	35

	page
Some parallel methods for polynomial root-finding by A.J. Maeder and S.A. Wynton	37
Ghost solutions and solitons by M.F. Maritz and S.W. Schoombie	39
A bounding principle for the incremental solution of the equations of path dependent plasticity by J.B. Martin	41
To be announced by J.L. Morris	
The relationship between terminal state constraints and penalties for discrete LQP problems by D.M. Murray	43
Mixed-time integration of coupled problems by H. Neishlos	45
An enumeration of the set of reasonable paths in the graph by M.E. Orłowska	47
Gauss-type quadrature formulas for spline functions by L. Pretorius	49
Computational stability of generalized time integration schemes for a split weather prediction model by H.A. Riphagen and A.P. Burger	51
One sided approximation with spline functions by C.H. Rohwer and J.M. de Villiers	53
Control of step size and order in extrapolation codes by L.F. Shampine	55
Efficient extrapolation methods for odes by L.F. Shampine	57
A parameter-free multiplier method for constrained minimization problems by J.A. Snyman	59
Obtaining an optimal value for a linear program with variable but bounded coefficients by P.J. Vermeulen	61
Recurrence in numerical approximations of the nonlinear Schrödinger equation by J.A.C. Weideman and B.M. Herbst	63
Spline collocation applied to some singular perturbation problems by C.J. Wright	65
Two pursuers and one evader in the plane : a stochastic pursuit- evasion differential game by V. Yavin	67
Efficient estimation of sparse Jacobian matrices by differences by T.J. Ypma	69
Numerical methods in input optimization by S. Zlobec	71
